About Us

Award winning community energy enterprises Selce and SE24 have partnered to offer a one-stop-shop lighting solution to South London organisations

Retrofitting your old lights with LEDs means your organisation could improve their lighting system at no upfront cost. We can support you through research, installation and system management, working with trusted partners to deliver a low cost, low maintenance solution.

HOW IT WORKS

NO UPFRONT COST

Our pay-as-you-save finance model ensures that you will pay back less than your energy bills savings each month. This means there is no upfront cost, and we fund our investment through green shares - meaning we're owned and run by the community of South London.

SOCIAL IMPACT

Using less energy lowers your organisation's impact on the environment helping your organisation to meet sustainability targets.

Also, Selce and SE24 are community organisations: revenues are reinvested into the South London community initiatives, such as alleviating fuel poverty.

IS YOUR BUILDING A GOOD FIT?

We're looking for high energy users - if your building currently uses old lighting (like incandescent or halogen lights), and needs to be lit day and night, please get in touch to book a lighting audit.

Here's what we look for:

- high electricity bills
- large number of lights
- lights being used for long hours daily (more than 8 hours)

Next Steps?
